

Web server setup guide.

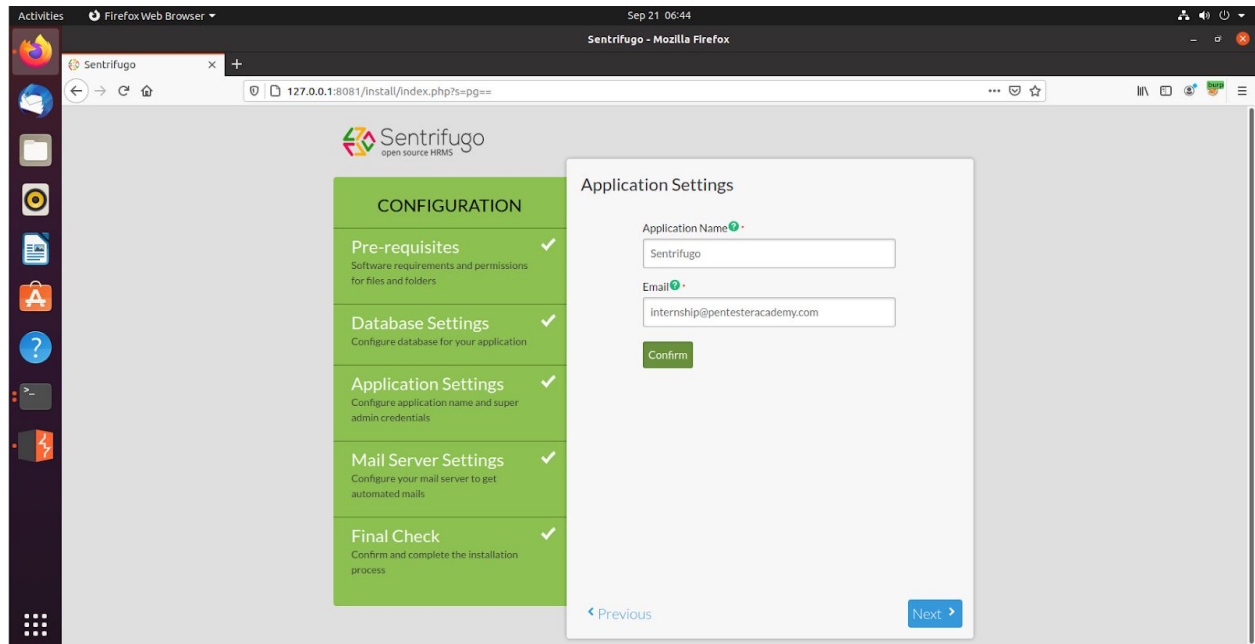

1. After successfully running docker as stated in README.md file web service will be up and running on port 8081 on localhost
2. All the installation Parameters have been already set in the fields, users have to just click on next and confirm on every page.

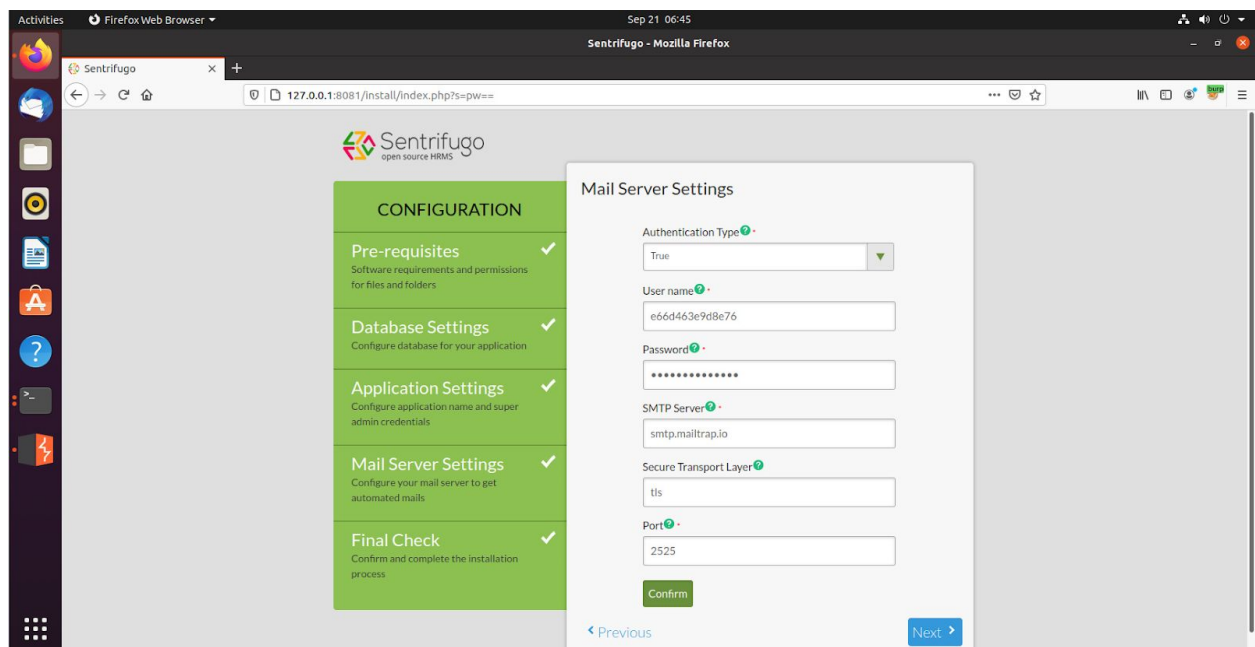

Click next

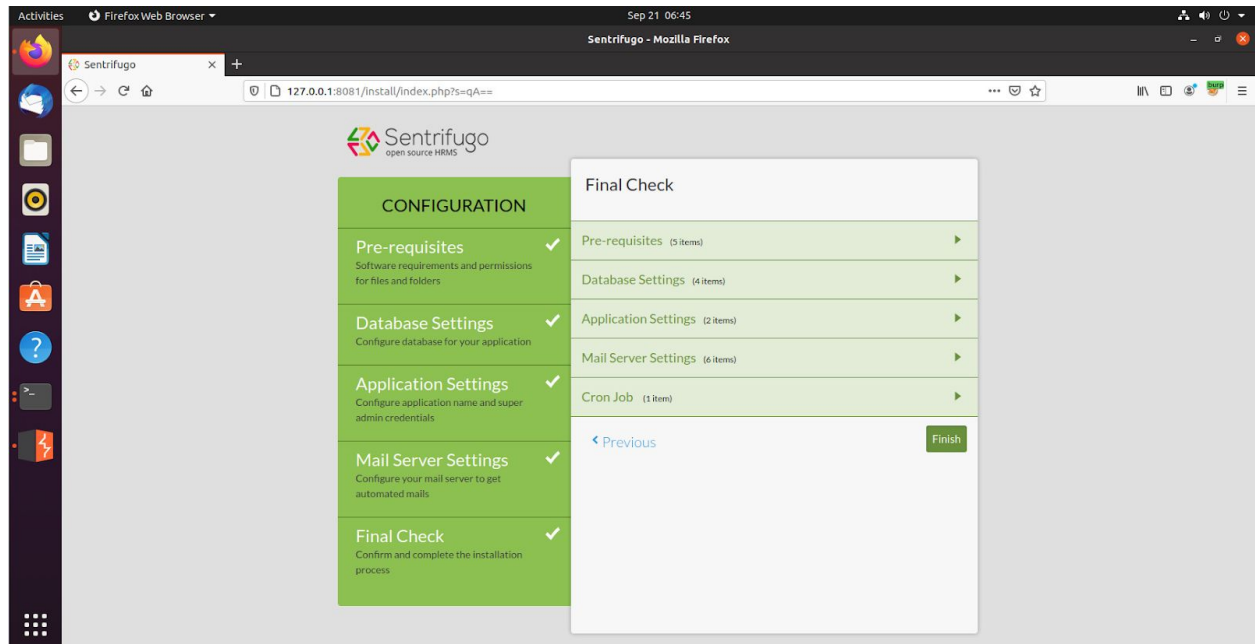

Click confirm and next (Don't forget to click on Confirm.)

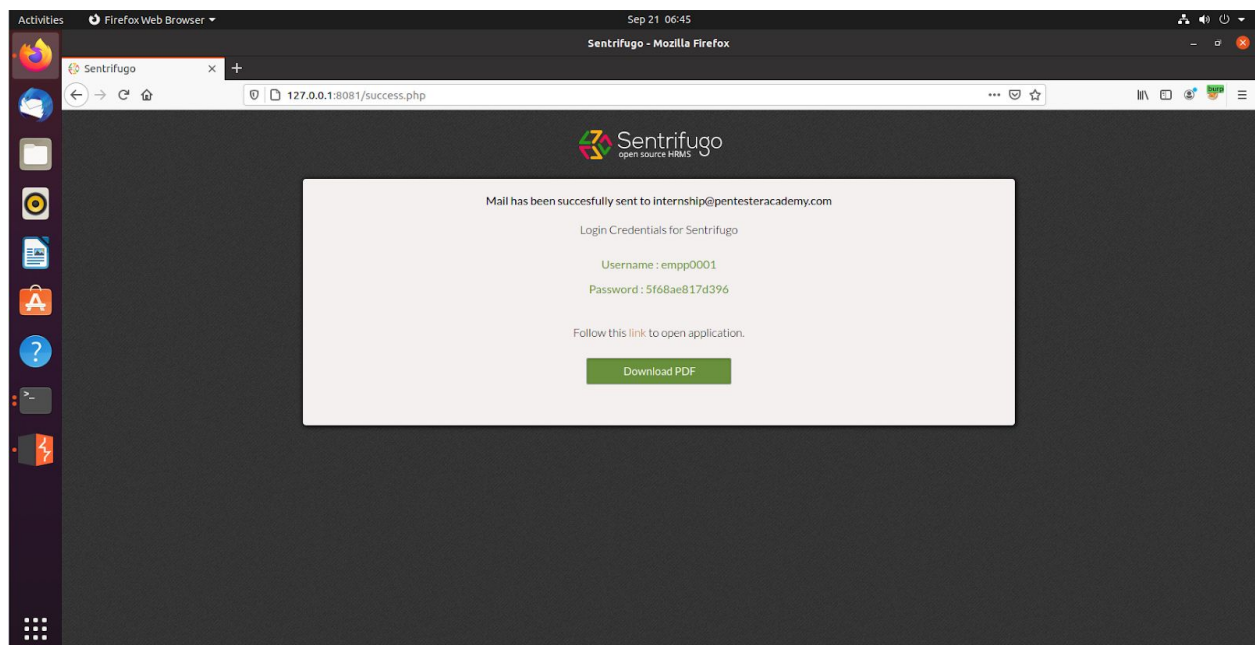

Click next

Edit info if information is expired or Click next.

Click Finish

On the final Step you will get employee ID and password for logging in.
Enter these Credentials in the login page to enter the dashboard.

Note sometimes the sentrifugo will not change the install directory to install_old directory on it's own. For that you need go into docker and change install directory to some other name to access the login page.
